COMMANDER VRAX ($VRAX)

Community Meme Token Whitepaper

Robinhood Chain · Chain ID 4663

Token Name	Commander Vrax
Ticker	$VRAX
Contract Address	0x351F65928A40657C31F51bB543F8bB3844D123FA
Network	Robinhood Chain (Ethereum L2 on Arbitrum Orbit)
Total Supply	1,000,000,000 VRAX (fixed)
Decimals	18
Standard	ERC-20
Document Date	October 15, 2026

Important: This is a community-prepared informational document for a meme token. It is not an official project whitepaper issued by any founding team, nor does it constitute an offer of securities, investment advice, or any guarantee of value.

1. Introduction

Commander Vrax ($VRAX) is a community-driven meme token deployed on Robinhood Chain. It draws its name and narrative from a character that appeared in Robinhood's HOOD Summit 2026 programming. During the event, a science-fiction skit featured Commander Vrax as an antagonistic figure; a subsequent official Robinhood social media post playfully transformed the character into a cat. The crypto community on Robinhood Chain quickly adopted the meme and launched tokens under the $VRAX ticker.

This particular contract (0x351F65928A40657C31F51bB543F8bB3844D123FA) is one of several independent $VRAX tokens that have appeared. It is a pure meme asset whose value is driven by community attention, narrative momentum, and speculative trading. There is no utility token mechanism, staking product, or claimed real-world use case beyond its role as a cultural token on the Robinhood Chain ecosystem.

2. Narrative & Community Vision

The meme centers on Commander Vrax, the cat who "wasn't supposed to be a cat." Community participants treat the token as a lighthearted symbol of the broader meme culture that has flourished on Robinhood Chain alongside its primary focus on tokenized real-world assets.

The shared vision among holders is simple: grow awareness of the Commander Vrax character, strengthen the on-chain community around the contract, and participate in the organic trading activity that meme tokens generate. There is no formal roadmap, team, or product development plan attached to this contract. Any future community initiatives (if they occur) would be organized independently by holders.

3. Tokenomics

The token follows a straightforward fixed-supply model typical of meme coins:

Parameter	Value
Total Supply	1,000,000,000 VRAX
Circulating Supply	1,000,000,000 VRAX (100%)
Max Supply	1,000,000,000 VRAX (fixed; no further minting)
Decimals	18
Token Standard	ERC-20
Liquidity Pair	VRAX / WETH on Uniswap V3 (0.01% fee tier)

Because the entire supply is already circulating, fully diluted valuation equals market capitalization at any given price. There are no vesting schedules, team allocations, or locked tokens associated with this contract that have been publicly disclosed.

4. Technology & Deployment

Robinhood Chain is an Ethereum Layer-2 network built using Arbitrum Orbit (Nitro). It uses ETH for gas and supports standard EVM tooling. The $VRAX contract is a standard ERC-20 implementation (OpenZeppelin-style) with 18 decimals.

Trading occurs primarily through decentralized exchanges. The main liquidity pool is a Uniswap V3 pool pairing VRAX with Wrapped ETH (WETH) at the 0.01% fee tier. Users interact with the token via any EVM-compatible wallet that supports custom networks (chain ID 4663).

Contract verification status and source code can be inspected on the Robinhood Chain block explorer (RobinScan / Blockscout). No independent security audit has been publicly published for this specific contract at the time of writing.

5. Market Context

Robinhood Chain has seen repeated waves of meme-token activity since its public launch. Commander Vrax tokens of various contracts have appeared following the HOOD Summit narrative. Multiple independent contracts share the same ticker and branding, which is common in meme cycles. Always verify the exact contract address before interacting with any token.

Price, volume, and holder counts for this specific contract have fluctuated sharply since the pool's creation in mid-October 2026, consistent with the high volatility characteristic of newly launched meme assets.

6. Risk Factors

Participation in $VRAX carries substantial risks, including but not limited to:

• **Extreme volatility:** Meme tokens can experience rapid and severe price declines, including losses approaching 100% of capital.

• **No utility or revenue:** The token has no claimed product, cash-flow mechanism, or rights attached to it.

• **Liquidity risk:** Thin liquidity can result in large price impact on relatively small trades.

• **Smart-contract risk:** While based on standard ERC-20 code, the contract has not undergone a publicly disclosed independent audit.

• **Narrative risk:** Value is dependent on continued community interest in the meme. Interest can dissipate quickly.

• **Look-alike tokens:** Multiple contracts use the $VRAX name. Interacting with the wrong address can result in total loss.

• **Regulatory uncertainty:** The legal classification of meme tokens remains unsettled in many jurisdictions.

• **No team accountability:** There is no identified team or legal entity responsible for the token.

7. Important Disclaimers

This document is provided for informational purposes only. It does not constitute financial, investment, legal, or tax advice. Nothing in this whitepaper should be interpreted as a solicitation to buy or sell any token.

$VRAX is not affiliated with, endorsed by, or issued by Robinhood Markets, Inc. or any of its affiliates. References to Robinhood events or characters are for narrative context only.

The total supply figure of 1 billion tokens and other technical details are based on publicly observable on-chain data as of the document date. Market statistics change continuously. Always verify current contract state, liquidity, and price on a block explorer and reputable DEX aggregators before taking any action.

Past performance of any meme token is not indicative of future results. You can lose some or all of the funds you allocate to speculative tokens. Only use capital you can afford to lose entirely.

8. How to Verify This Token

Before interacting with $VRAX:

1. Confirm the exact contract address: **0x351F65928A40657C31F51bB543F8bB3844D123FA** on Robinhood Chain (chain ID 4663).

2. Inspect the contract on the official Robinhood Chain explorer.

3. Check the Uniswap V3 pool liquidity and recent trades.

4. Be aware that other $VRAX contracts exist; match the full address, not just the ticker.

— End of Document —

This whitepaper was prepared as a community informational document based on publicly available on-chain and media data. It is not an official project publication.
